## MANAGING A REMOTE DEVICE

## ABSTRACT

An agent obtains data from a device by receiving a plugin containing system calls for obtaining the data from the
device, loading the plug-in into the agent, obtaining the data
from the device using the system calls, and transmitting the
data over an external network using one or more of a plurality
of protocols. The data is provided to a client by formatting
the data, and making the formatted data accessible to a client
via the external network.
